

What are our team goals for this project?

Ensure members establish a clear understanding of the data analysis procedure and how we will be able to predict an outcome based on the selected dataset.

Created an accurate and rigorous analysis of the dataset, strong communication with the team. Make sure the work is divided evenly among all group members present.

Create a clean presentation of our final result, making sure it's logically sound and rigorous.

Learn from the background of one another, allow feedback from different members to allow diversity.

What do we want to accomplish?

Create a predictive model that is both efficient and accurate.

Understand the strength and the weakness of the selected dataset. Understanding potential issues with the dataset and attempting to address those issues through the model creation.

What skills do we want to develop or refine?

Ability to use R in effective analysis and visualization of a dataset.

Communication skills and ability to work effectively as a team.

Understanding version control and best ways to resolve merge conflicts, commits, and rollbacks.

Effective share knowledge and present reasoning in a concise way.

What do we expect of one another regarding attendance at meetings, participation, frequency of communication, quality of work, etc.?

Not be late. Attend the meetings.

Communicate the progress, write clear commit messages, work on independent branches, avoid pushing unreviewed code to master.

Meet once a week and be able to reach members online if needed.

What rules can we agree on to help us meet our goals and expectations?

Communicate effectively with each other. Do the work assigned to you and ask for help when needed. Do not leave things until the last minute so we have time to look over and check our work. Help each other and be supportive along the way to meet the deadlines

we have put to keep everyone on track. Be open to adjusting your plan if circumstances change or if you encounter obstacles. Offer constructive feedback to help individuals improve their performance.

How will we address non-performance regarding these goals, expectations, policies and procedures?

First communicate concerns to them and allow them to redeem themselves. Otherwise, the group evaluation will be reflective of how well each member performed in the group.
